1. The specification is objected to. Line 12 on page 1 must be completed.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Scott et al.

Scott et al teaches the claimed antenna system including: an array of antenna elements (Figure 17) defining a boresight direction, a variable power divider using a single adjustable control element to divide an input voltage signal into a pair of complimentary amplitude voltage drive signals over a range of voltage amplitude division (Figure 22), a beam forming network receiving the voltage drive signals and producing a plurality of beam driving signals (Figure 22), a power distribution network delivering each beam driving signal to one or more associated antenna elements (Figures 17 and 22), and field adjustable tilt direction actuator (Figure 22).
